1. Project Overview

- **Project Name:** Automated Intelligence & Report Governance Pipeline
- **Objective:** Fast, secure, and audited generation of business reports with human oversight.

2. Workflow Architecture & Nodes

- **Parallel Execution Layer:**
  - **Text Generator:** Drafts the narrative overview and executive summary.
  - **Data Summarizer:** Condenses raw metrics and market data tables.
  - **Insight Extractor:** Identifies key growth opportunities and risk factors.
- **Operational & Logging Nodes:**
  - **Monitoring / Logs Node (5):** Tracks execution latency, token usage, and event success/failure rates, writing directly to the central logging database.
  - **Controlled Actuation Node (3):** Restricts write permissions exclusively to the designated `/Client_Reports_2026` secure cloud folder/database.
- **Quality Control & Governance:**
  - **Human-in-the-loop Node (1):** Pauses workflow execution and queues the generated report for mandatory manager review and approval via UI click before final publication.

3. Security & Compliance Settings

- **Access Control:** Sharing permissions restricted strictly to authorized internal domain groups (e.g., `@yourcompany.com`).
- **Data Isolation:** All read/write operations confined to approved project boundaries to prevent data leakage.
